PFAS (Per- and polyfluoroalkyl substances)

Manufacturer Declaration of Conformity

Per- and polyfluorinated alkyl substances (hereafter abbreviated as PFAS) are a group of extremely persistent chemicals that are used in many consumer products. PFAS are used in products because they can, for example, increase oil and water repellency or withstand high temperatures. There are thousands of different PFAS on the market. As these substances are persistent chemicals, they accumulate in humans and the environment.

Traco Electronic AG (TRACO) hereby declares that we take care not to design in such substances during development. If the use of PFAS is necessary to fulfil the high-performance criteria of our TRACO POWER products, we do declare the use.

TRACO POWER products have been manufactured without the intentional use of PFAS. If the use of such substances cannot be avoided, we do declare it.

The declaration of the use of such substances (like teflon, which is often used in electronics) will be part of the product datasheet. This declaration process will be introduced during Q4 of 2024. Please contact us (www.tracoserviceportal.com) in case you need this information now.

TRACO has processes and procedures in place to ensure that our suppliers meet our expectations. We communicate our requirements to our suppliers to ensure that PFAS are not used in our products. We subsequently obtain declarations from our suppliers confirming their commitment and upstream due diligence.

TRACO is diligently working to ensure that our supply chain is, is going to or remains free of PFAS. Please contact us if you have any further questions about our program.

A handwritten signature in blue ink, appearing to read "S. Schaffhauser".
