## 2. Radiated Emissions Measurements

**Equipment under Test:** TIW 24-124  
**EUT Serial No.:** 31323810805  
**Customer Spec:** CS-24UWAXXX-Rev4.doc  
**Date:** 11/04/2014  
**Standards:** IEC61000-6-3: 2011 referring to CISPR 16-2-3: 2003

For an apparatus to comply with EMC radiated emissions requirements as set down in CISPR 16-2-3, free field measurements need to be performed. A test method similar to that described in IEC61204-3 (for low-voltage power supplies) section 6.4.2 shall be used here instead of free field measurements. This test is designed to give a good indication of whether an EUT will pass free field measurements or not. The absorber clamp used in this method is replaced by a Fischer high frequency current probe (Model: F-33-1). The limits used are set by comparison with open field measurements and are compensated by 20dB per frequency decade. Two limit lines are indicated; Fis\_a and Fis\_b, and the results may be interpreted as follows:

- Below limit line Fis\_b: Limits are kept
- Below limit line Fis\_a: Limits probably kept
- Above limit line Fis\_a: Limits most likely not kept

Final Compliance can only be established by free field measurements in accordance to the relevant standard applicable to the apparatus or enclosure in which the power supply is used

### Notes:

- EUT tested under normal operating conditions of 230V 50Hz input at nominal load (24V/1.0A Resistive).
- Emissions measured using receiver Agilent E7402A and FCC RF current probe
- RF current probe kept a distance of 10cm from input/output
- Tests carried out in shielded room
- Tested to IEC 61000-6-3:Ed 2.1 Class B limits
