### Conditions Of Acceptability: Engineering Conditions of Acceptability

For use only in or with complete equipment where the acceptability of the combination is determined by UL LLC. When installed in an end-product, consideration must be given to the following:

- The following output circuits are at ES1 energy levels : Output
- The following output circuits are at PS2 energy levels : Output
- The investigated Pollution Degree is : 2
- Proper bonding to the end-product main protective earthing termination is : Not required
- The following end-product enclosures are required : Electrical, Fire, Mechanical
- The terminals of the DC-DC Converter are only suitable for factory wiring only.

- The need for suitable electrical enclosure (for ES safeguard), fire enclosure (for PS safeguard), mechanical enclosure (for MS safeguard) and safeguard for thermal burn injury (for TS safeguard) is to be evaluated and provided (if necessary) in the end-product.
- The DC-DC Converter was evaluated for Functional Insulation and is intended to be installed in an isolated secondary hazardous voltage which is separated from a.c. mains circuit (or primary circuits) by Double or Reinforce Insulation.
- Tests for Abnormal operating and Single Fault conditions were carried out with an external, time-delay fuse having a current rating 4.0 A for RCD20-36xyU, RCD20-72xyU , YY115-36 series; 2.0 A for YY115-72 series, manufacturer by Littelfuse, type 215; Tests should be repeated when it's employed in the end-use equipment with a differently rated overcurrent protective device.
- Prospective touch voltage has been considered on converter output pins, touch voltage with respect to earth may be considered in the end product.
- The equipment was evaluated for a maximum operating altitude of 5000 m.

- The DC-DC Converter was evaluated for Reinforced Insulation between input and output circuits and is intended to be supplied by an isolated or non-isolated DC source.
- Tests for Abnormal operating and Single Fault conditions were carried out with an external, time-delay fuse having a current rating 1.25 A for MPK06-12 series; 0.63 A for MPK06-24 series; 0.315 A for MPK06-48 series, manufactured by Littelfuse, type 215; Tests should be repeated when it's employed in the end-use equipment with a differently rated overcurrent protective device.
- Prospective touch voltage has been considered on converter output pins, touch voltage with respect to earth may be considered in the end product.
- The equipment was evaluated for a maximum operating altitude of 5000 m and clearances were considered and the required clearances were multiplied with an altitude correction factor of 1.48.
